

Zepto Supply Chain and Inventory Analysis

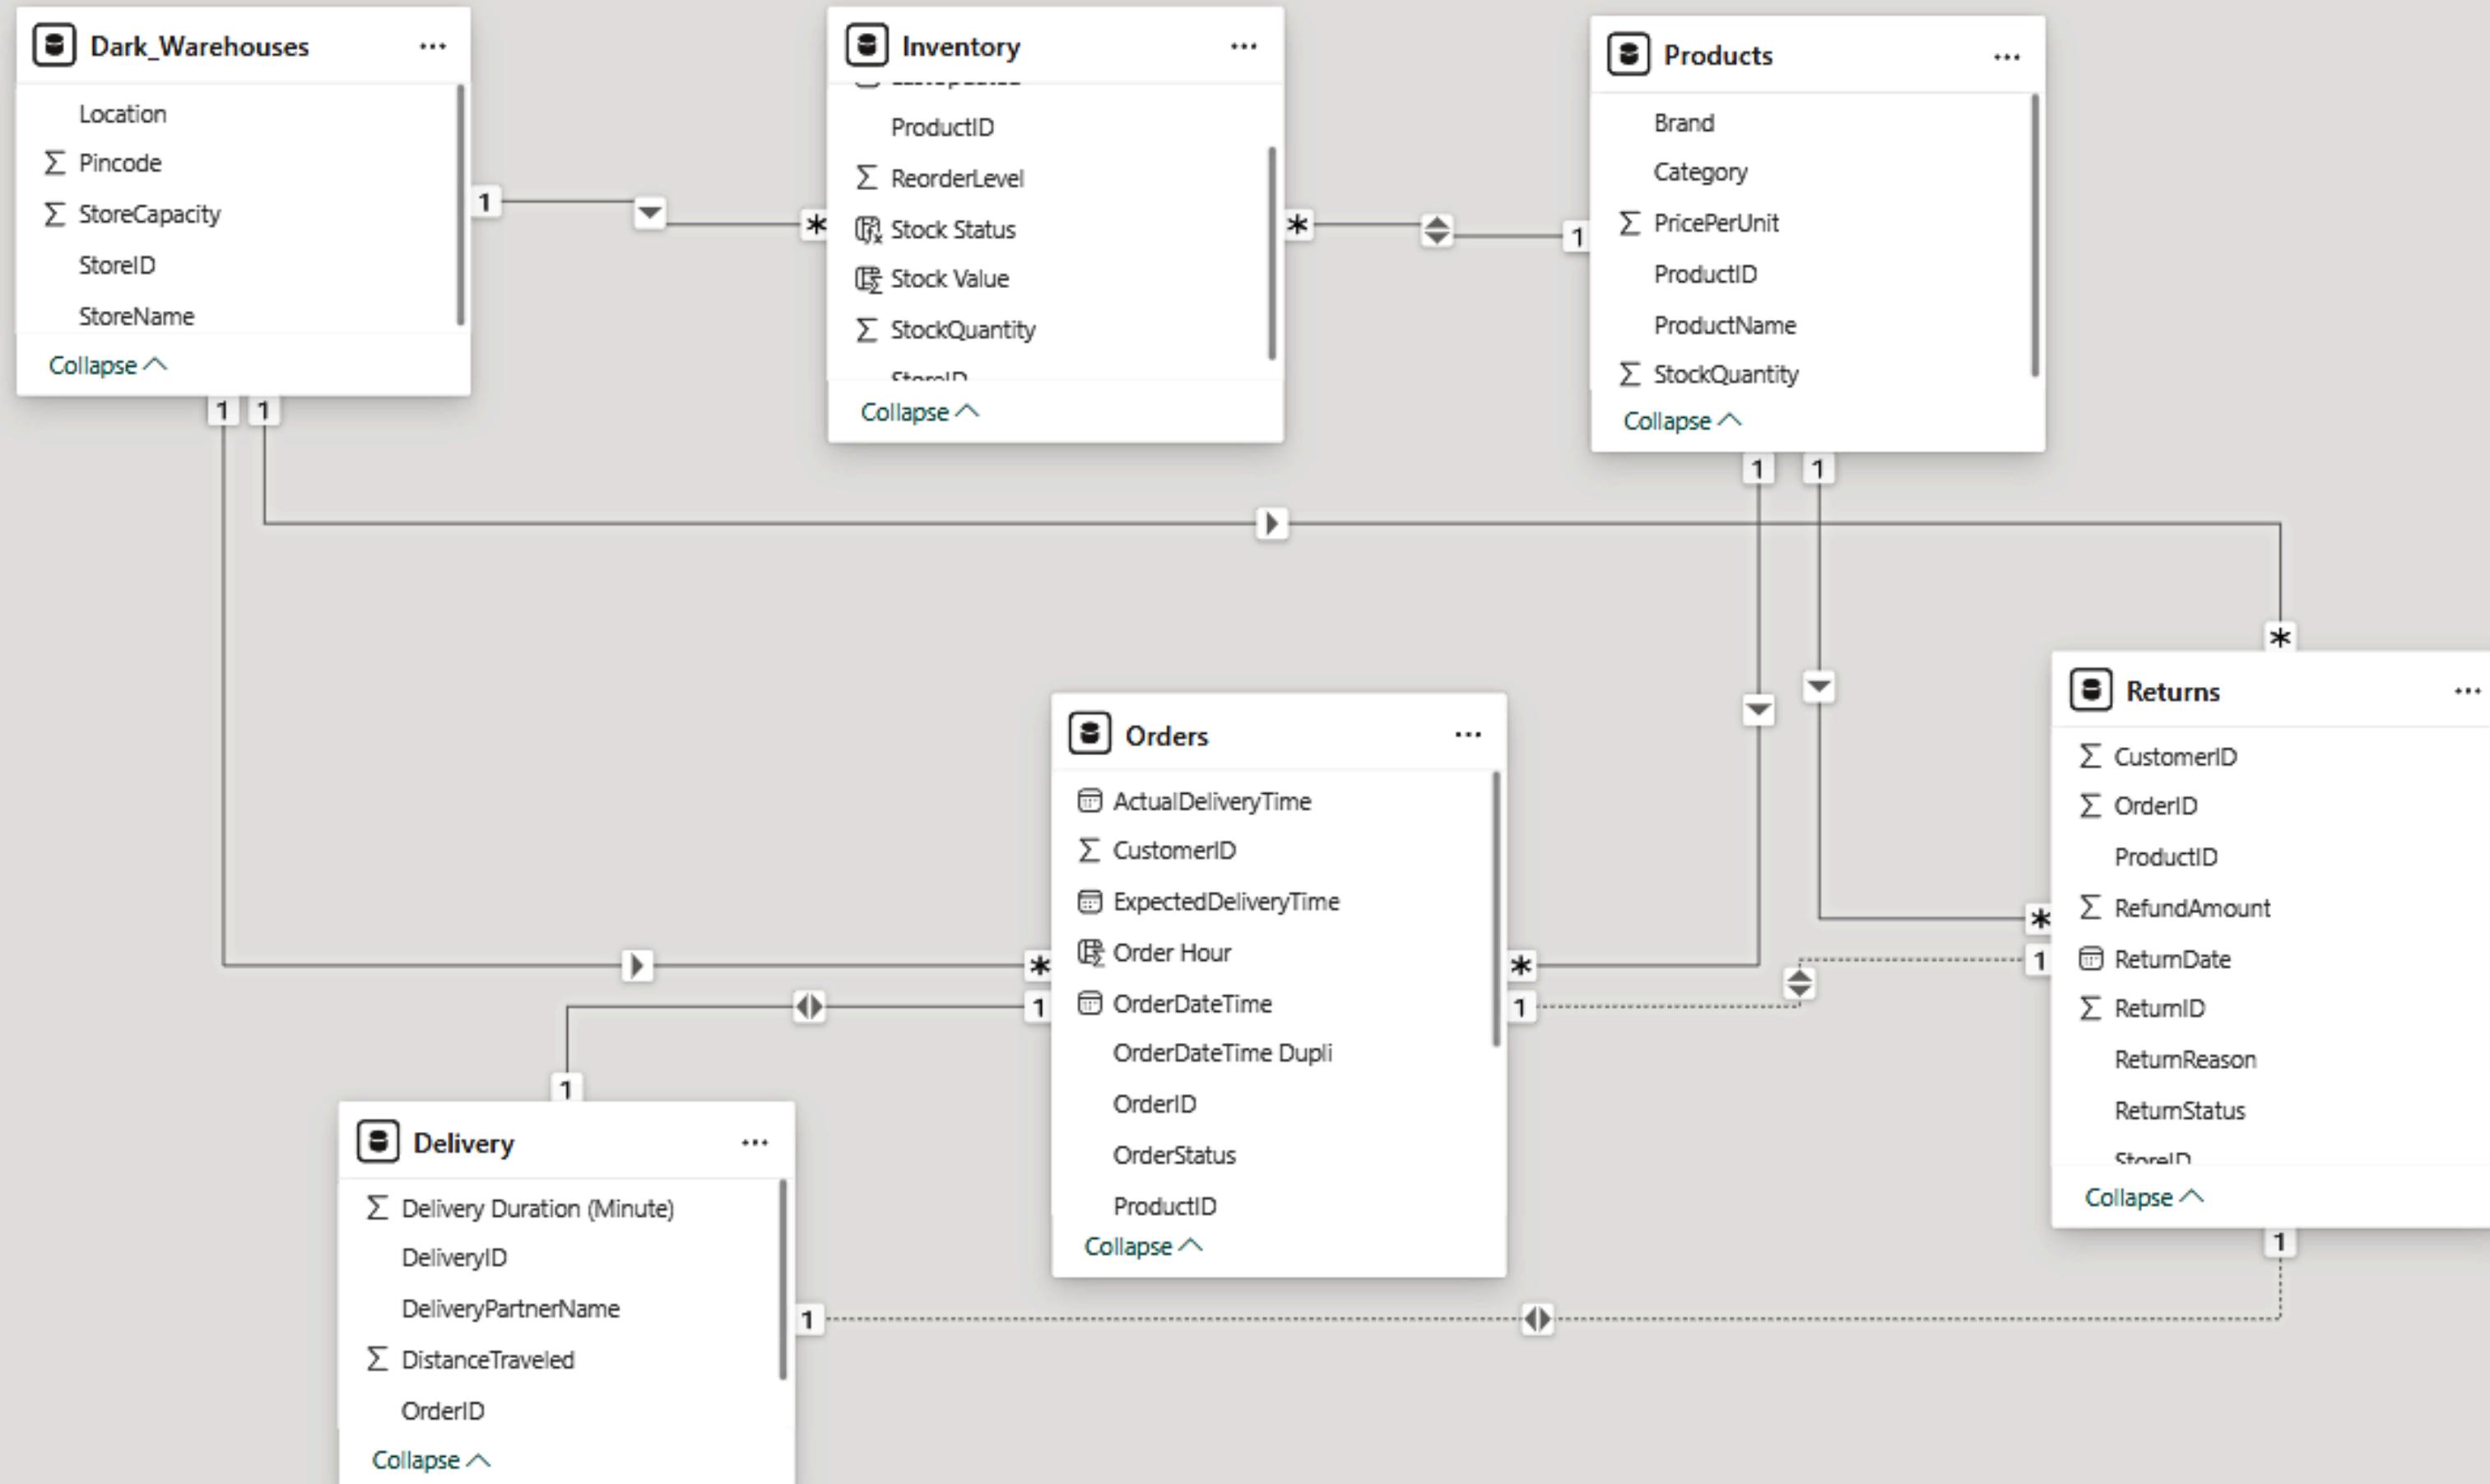

By: Ansh Rathod

About and Goal of the Project

- This project is a complete analysis of Zepto's supply chain and inventory operations using two months of 2025 data.
- I used Power BI to connect all of Zepto's raw data - from sales and warehouse stock to delivery and return records - and built three focused dashboards.
- The main goal was not just to create charts, but to tell a clear story that answers key business questions.
- I aimed to find the root causes of problems, such as what's causing late deliveries or why items are out of stock.
- The final objective is to give managers a quick insights that they can make fast, data-driven decisions to reduce costs and keep customers happy.

Total Revenue by Category and Brand

Total Orders by Order Hours

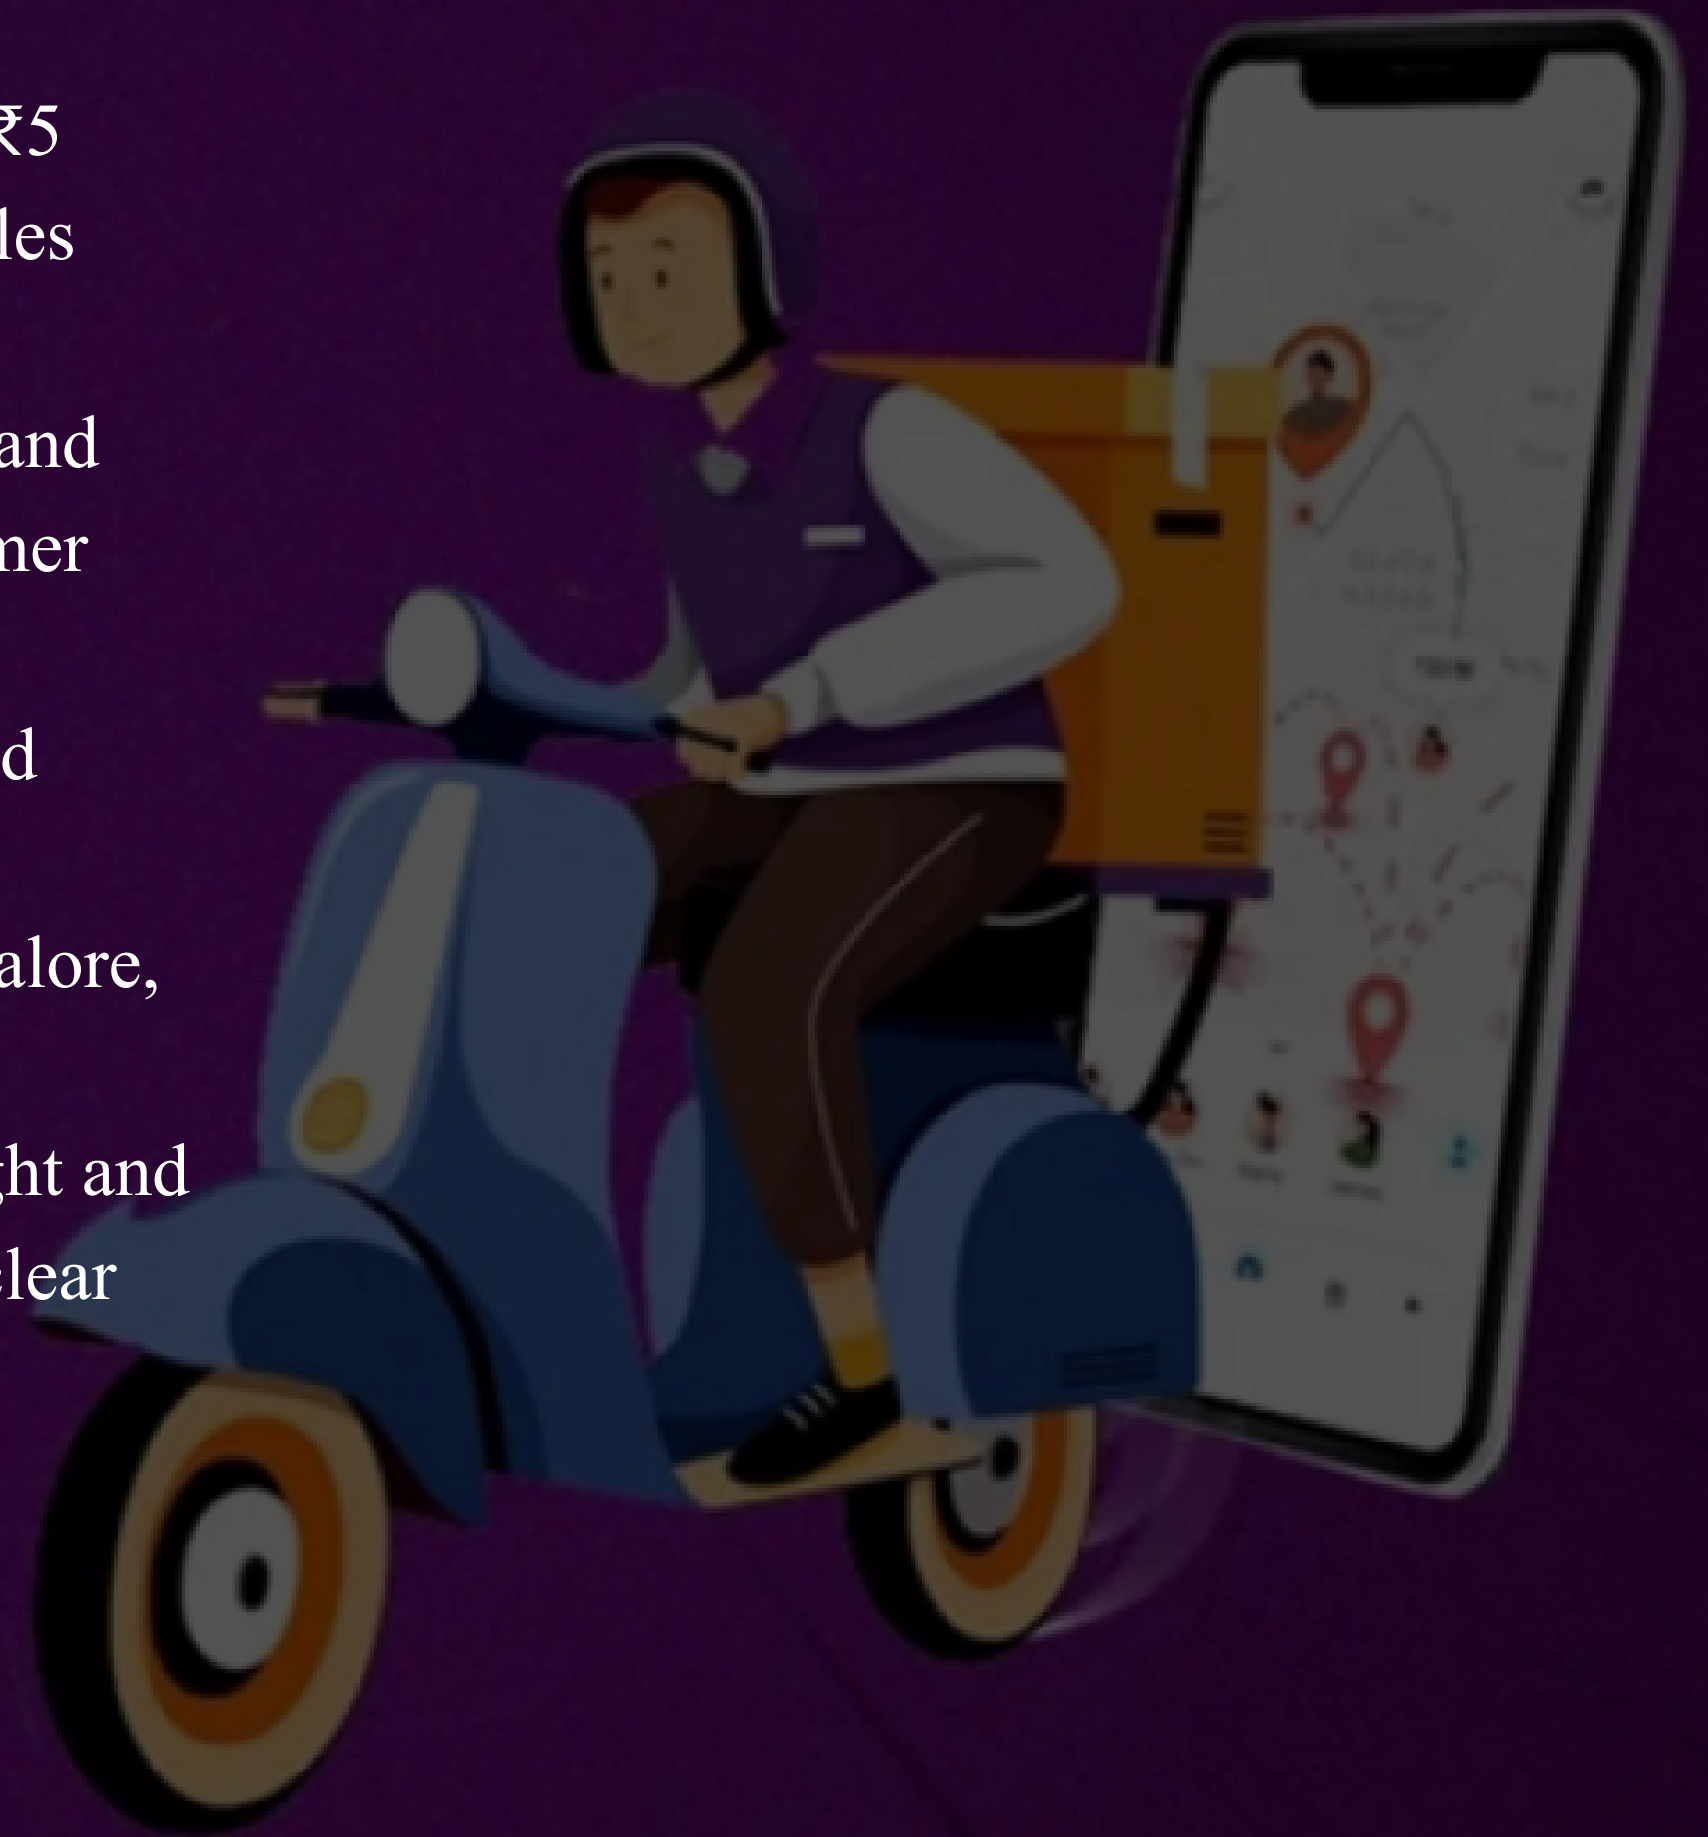

Total Revenue by Location and Pincode

Insights:

- The dashboard highlights that total revenue reached ₹5 million with over 10,000 orders, indicating strong sales performance across Zepto hubs.
- However, the on-time delivery rate is only 20.10%, and around 1,000 product returns suggest possible customer dissatisfaction linked to delays.
- Category analysis shows Grocery, Personal Care, and Beverages drive the majority of revenue, while top-performing hubs are located in Mumbai, Pune, Bangalore, and Hyderabad.
- Order trends show two major peaks - around midnight and during evening hours (2 PM–11 PM) - highlighting clear demand concentration periods.

Insights:

- The dashboard provides a clear view of Zepto's inventory performance across hubs, showing a total stock value of ₹3 million and over 19,000 stocked units, reflecting efficient stock management.
- However, 256 items are below the reorder level, signaling the need for timely restocking to prevent stockouts and maintain availability.
- Product performance analysis shows most items clustered between 400–600 units in both quantity and price per unit, indicating steady demand across categories.
- Inventory value distribution remains balanced across Zepto Hub 1, Hub 10, and Hub 100, ensuring consistent product coverage in Beverages, Dairy, and Electronics.
- Overall, inventory levels are healthy, but replenishing below-reorder products is essential to sustain smooth operations and avoid supply gaps.

Delivery Efficiency (Time vs. Distance)

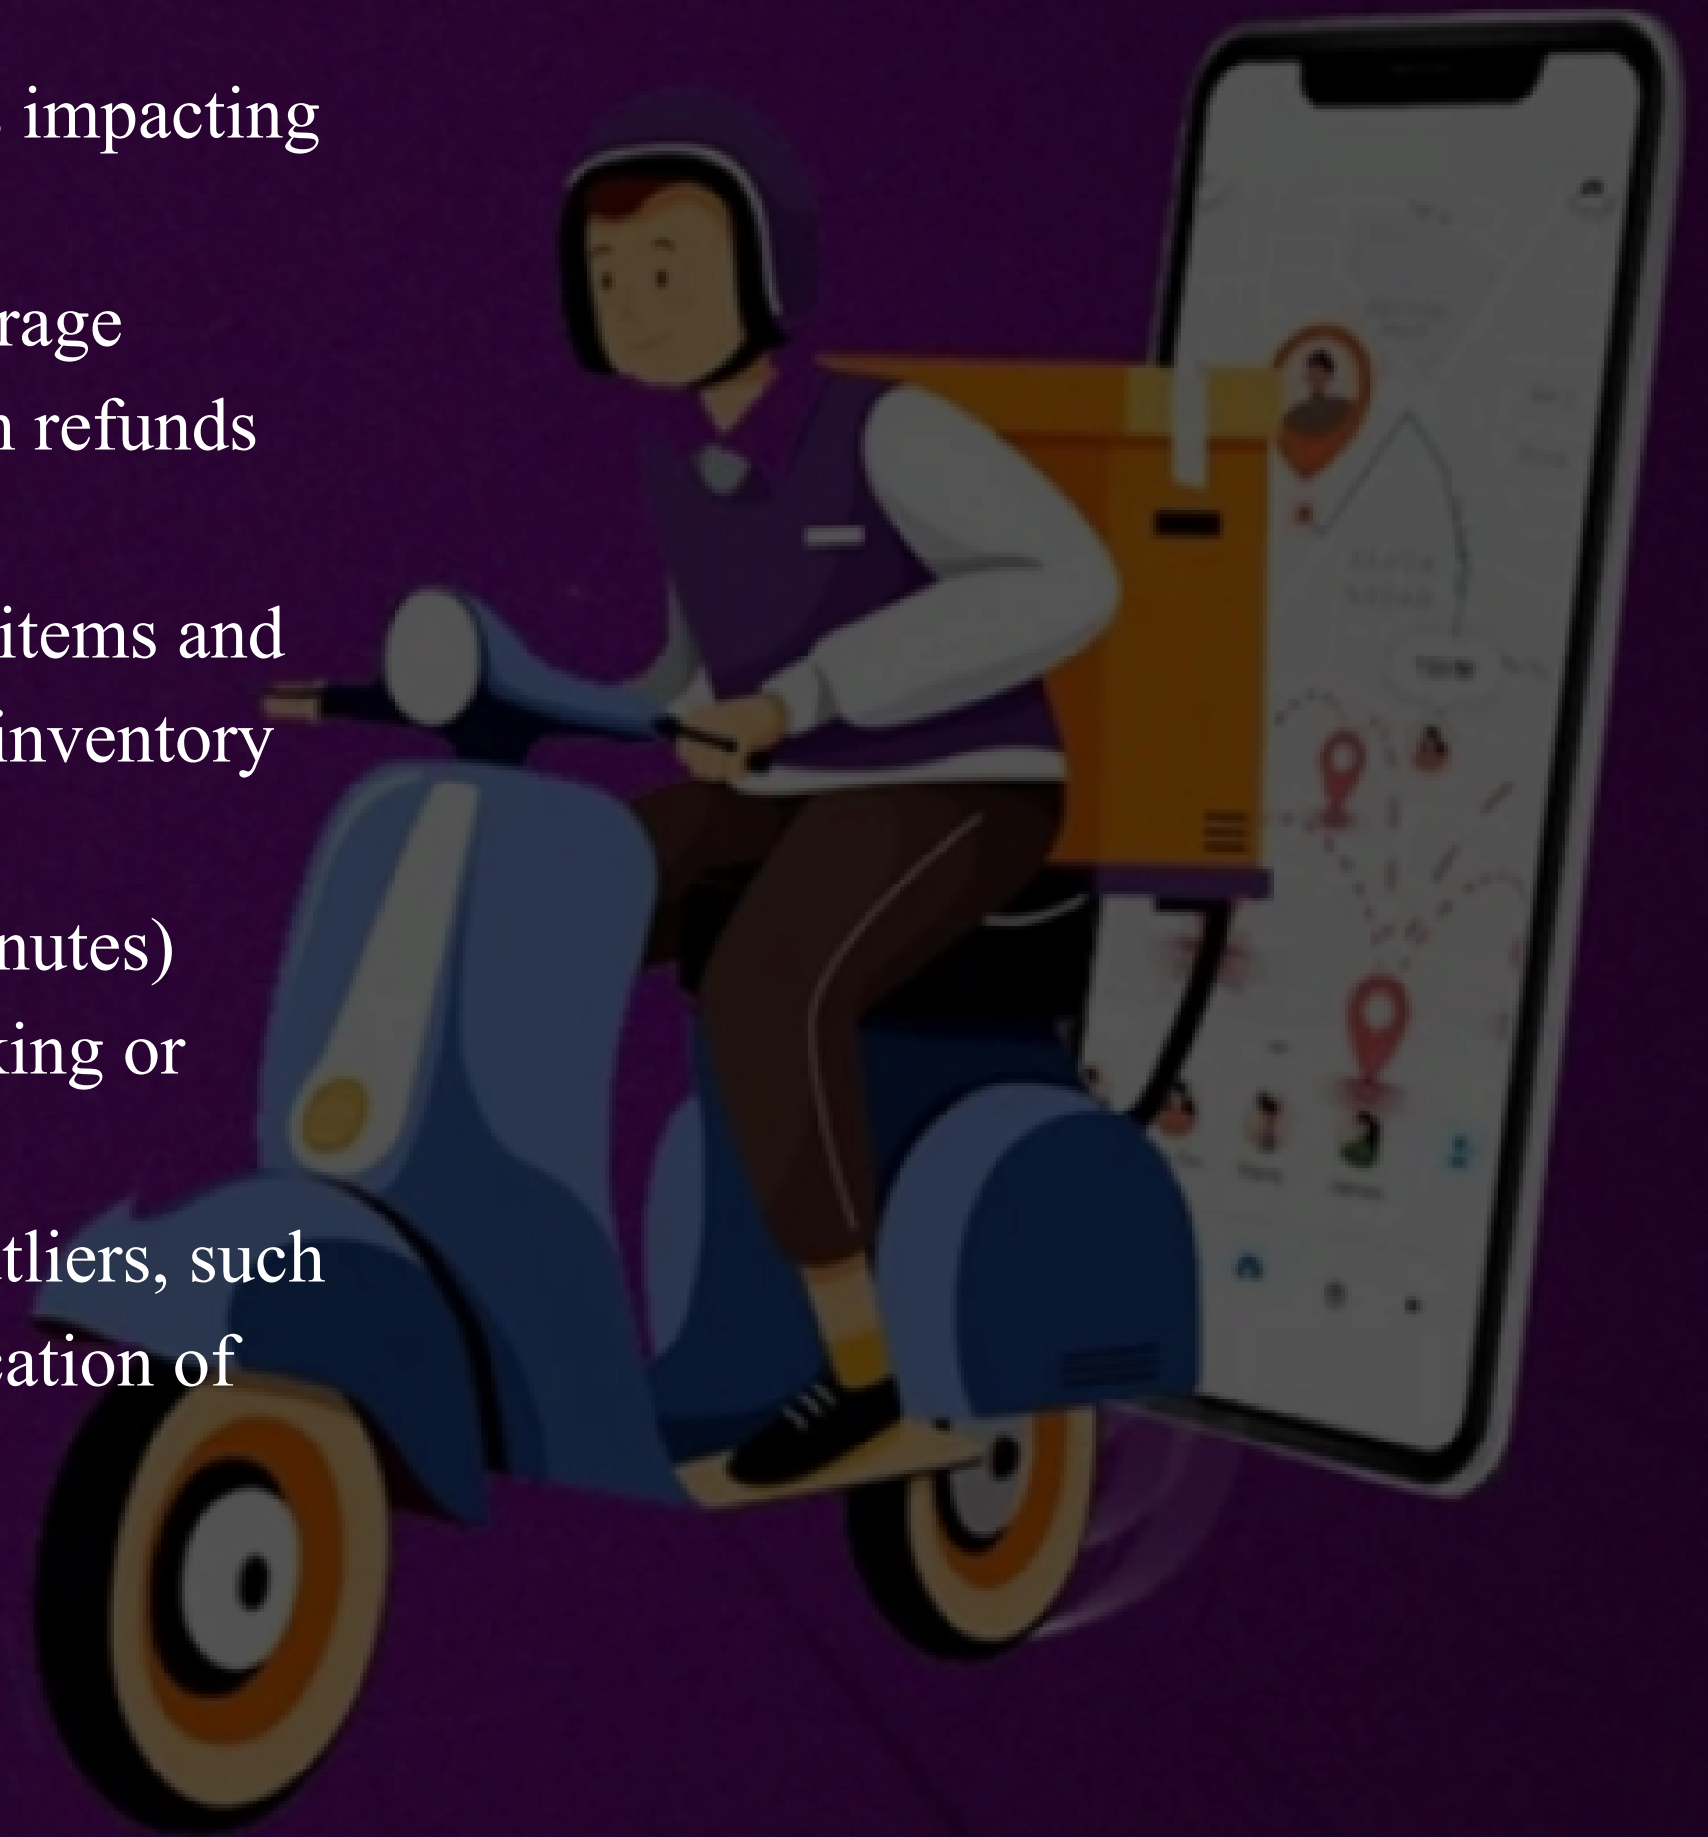

Avg Delivery Time (mins) by DeliveryPartnerName

Insights:

- The dashboard reveals critical delivery inefficiencies impacting Zepto's 10-minute promise.
- On-time delivery stands at only 20.10%, with an average delivery time of 20.79 minutes, resulting in ₹479K in refunds from over 1,000 returns.
- Analysis shows 52% of returns stem from damaged items and 48% from stale products, pointing to packaging and inventory rotation issues.
- Consistent delivery times across partners (20–22 minutes) indicate a system-wide delay caused by in-store packing or routing inefficiencies.
- The Delivery Efficiency chart highlights extreme outliers, such as a 2-km order taking 50 minutes, enabling identification of specific failures for corrective action.
